

Technical Resource Outsourcing

Save up to 65% of cost through outsourcing!

Technical Resource Outsourcing (TRO) has served clients like you for the past 7 years in providing technical resources for software projects, products and other IT related services. TRO is a subsidiary of ESOLPK group (www.esolpk.com), one of the leading IT services firm in South Asia. Our experience in outsourcing has enabled us to provide our clients with best and most reliable services at affordable costs. Basic model of TRO services is that the customer engages our IT human resources as per the requirements by utilizing our offshore resources and facilities. You will work directly with seasoned project managers or resources and consider them as an off-shore unit of your own business. You will never have to worry about expansions, hiring, firing, office space, healthcare and retirement plans, HR related problems and physical infrastructure. At a fixed monthly cost, we will take care of your IT related needs inclusive of development, quality assurance, support and other activities.

Our specialization is to provide services to software companies, IT firms, SMEs and start ups alike. In addition, we offer expertise in product and project development. Our Offshore Development Centers (ODCs) are located in South Asia. Our resources are well experienced and dedicated to serve you to achieve your vision, goals, and objectives. Our flexible ODC models can be molded to cater the specific customers' requirements. TRO's long list of satisfied clientele is ever growing and we get 80% of our business from repeat customers. We know exactly the fears and risks of customers prior to outsourcing to any company. Through our deep understanding of the processes, we minimize risk to almost nothing for our customers. We offer risk free guarantees such as security of data, intellectual property protection, low costs and transfer of knowledge back to the customer.

We protect the interests of our customers by following eSource Capability Model for Service Providers (eSCM SP). Our projects and products are developed under the strict adherence to the guidelines of CMMi and ISO 9000:2001 standards of quality. To ensure the data and knowledge security, we follow ISO 27001 standards and procedures. We are Microsoft Certified Partners and our resources have wide experience in Open Source and Oracle Technologies as well.

Extend your technical team at a fraction of cost. Outsource to TRO
